

# BIG DATA ANALYSIS

## TA class III

TA : Lee Chi-Hsuan

# Git & GitHub

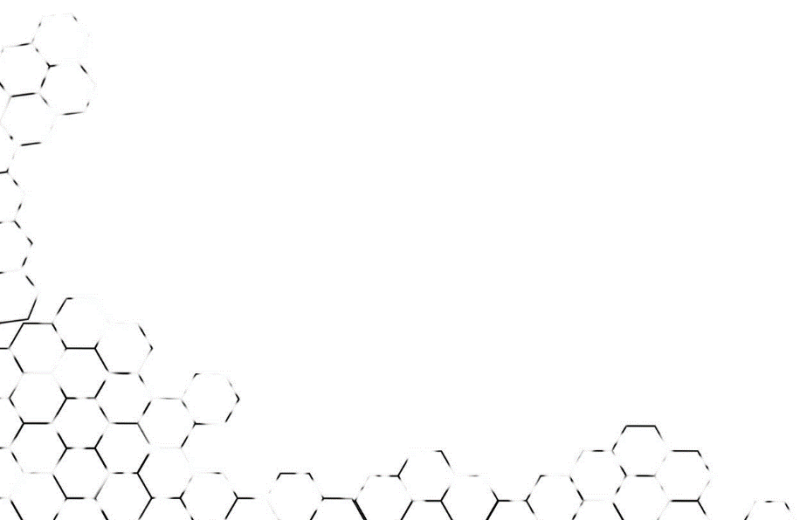

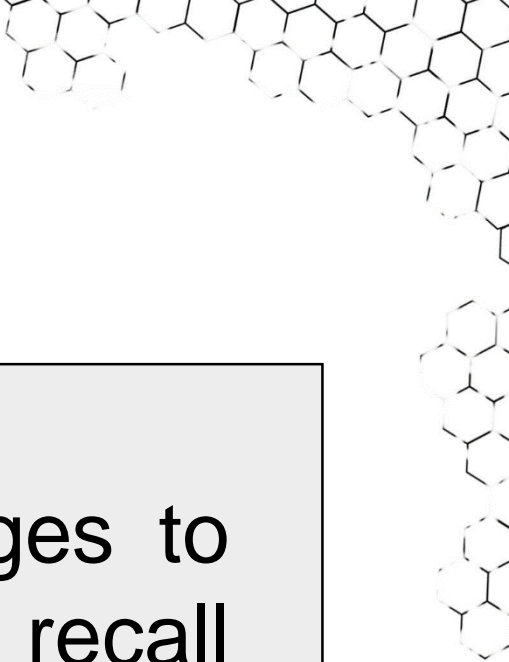

# VCS

## Version Control System

VERSION CONTROL SYSTEMS

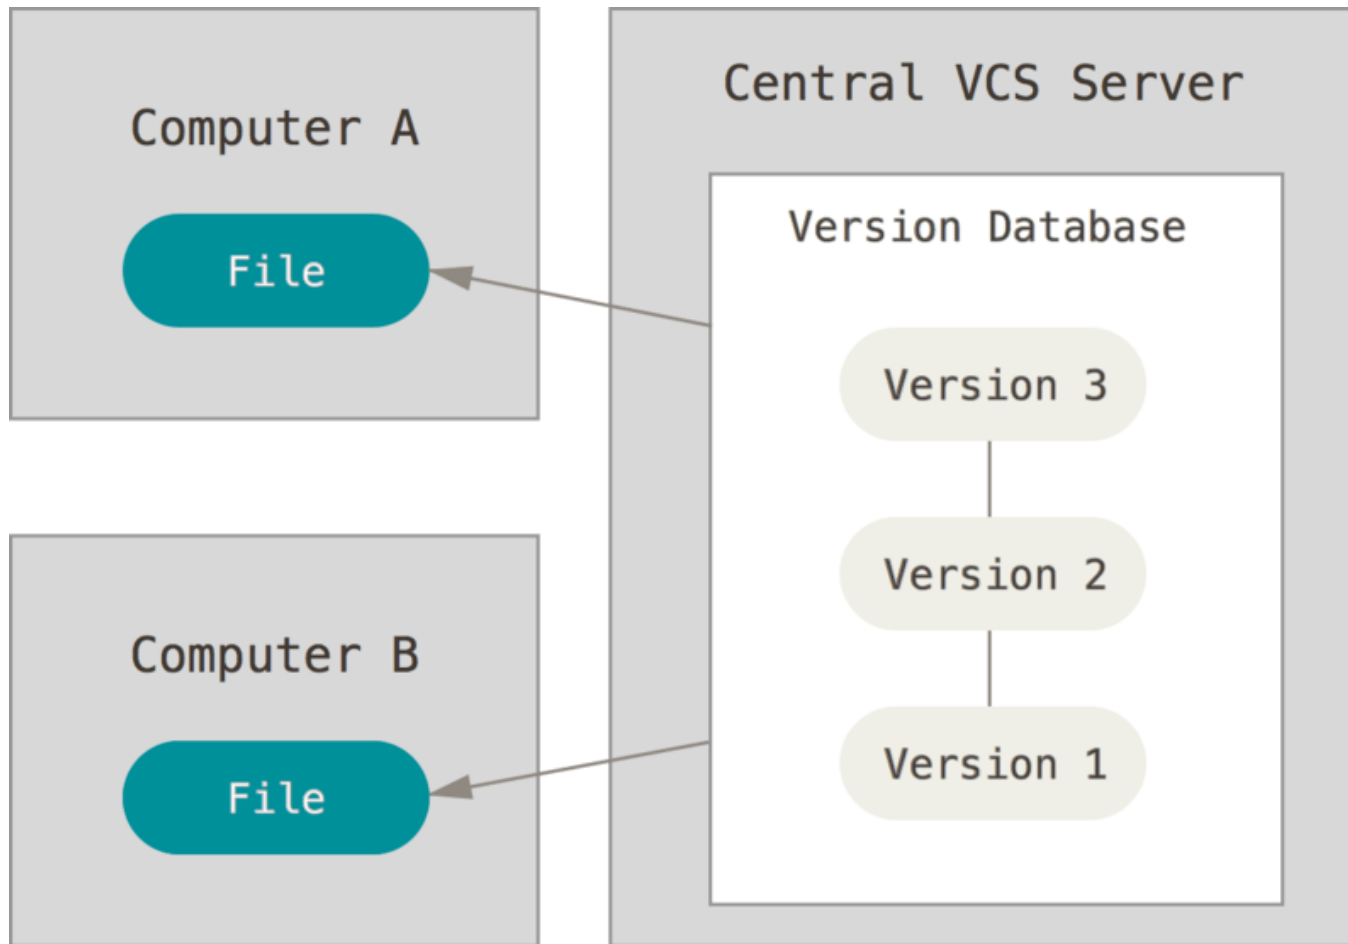

A system that records changes to files over time so that you can recall specific versions later.

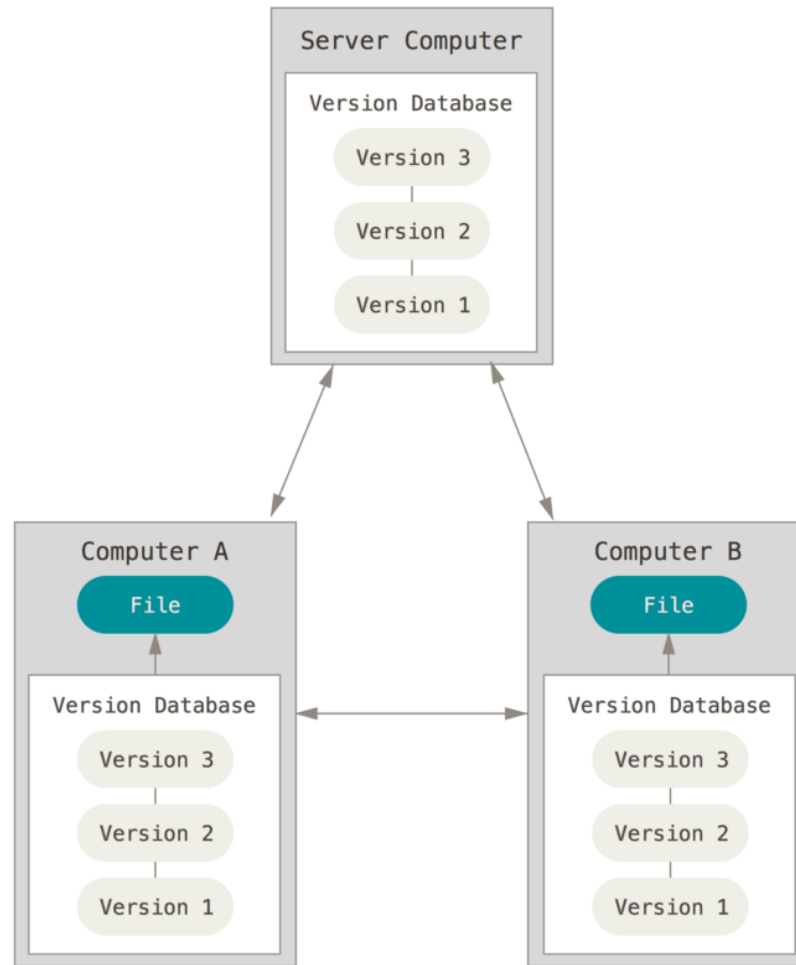

# Local VCS

# Centralized VCS

# Distributed Version VCS

# Git

 **git** --local-branching-on-the-cheap

Git is a **free and open source** distributed version control system designed to handle everything from small to very large projects with speed and efficiency.

Git is **easy to learn** and has a **tiny footprint with lightning fast performance**. It outclasses SCM tools like Subversion, CVS, Perforce, and ClearCase with features like **cheap local branching**, convenient staging areas, and **multiple workflows**.

### About

The advantages of Git compared to other source control systems.

### Documentation

Command reference pages, Pro Git book content, videos and other material.

### Downloads

GUI clients and binary releases for all major platforms.

### Community

Get involved! Bug reporting, mailing list, chat, development and more.

Latest source Release

$ git log
commit 694c4a5a9166800fc412c909434dadd9142c6d75 (HEAD -> master, origin/master)
Author: CY <cyclonelee24@gmail.com>
Date: Sat Sep 26 21:44:01 2020 +0800

    First commit of the ipynb file.

commit 6881570d510eb1a6c35484b3c88952d455285f98
Author: CY <cyclonelee24@gmail.com>
Date: Sat Sep 26 21:38:03 2020 +0800

    Add the .gitignor file in the folder.

commit 283eeebdb8878ca328d95e736d5a90c60e310b6c
Author: CY <cyclonelee24@gmail.com>
Date: Sat Sep 26 21:22:01 2020 +0800

    Modify the PPT

commit 893b2b13e03c92bd1272a9ec332662271b61bcbf
Author: CY <cyclonelee24@gmail.com>
Date: Sat Sep 26 16:58:39 2020 +0800
```

- `git checkout <sha1>`  
to check out a particular commit  
(detached HEAD !)

- `git revert <sha1>`  
to revert a particular commit

<sha1>

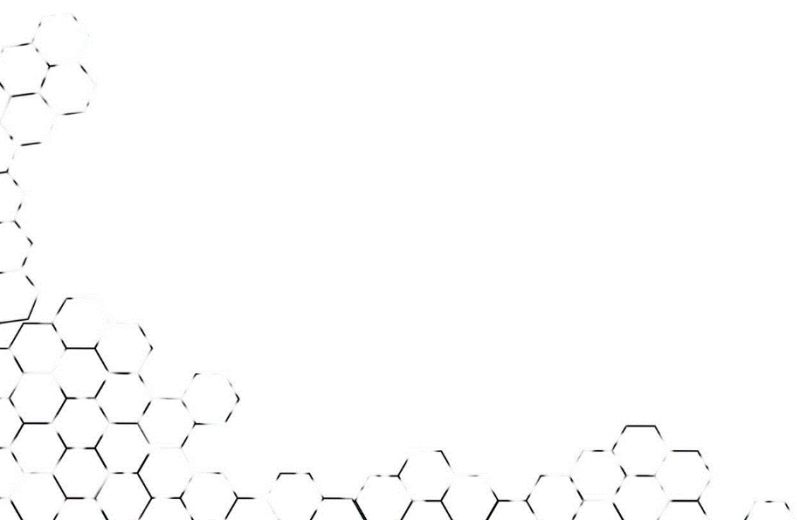

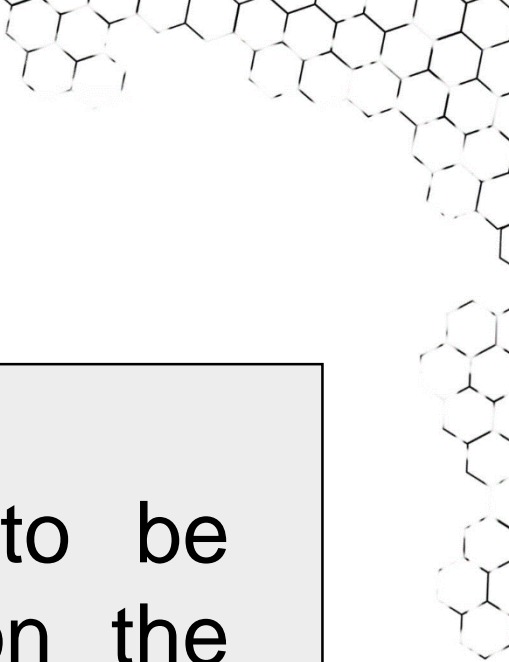

```
commit 6881570d510eb1a6c35484b3c88952d455285f98
Author: CY <cyclonelee34@gmail.com>
Date: Sat Sep 26 21:38:03 2020 +0800
```

Add the .gitignor file in the folder.

# branch

The default branch git create for you when a new git repo is initialized is called “master”.

Branches enable changes to be  
worked on without disruption the  
most current working state,

- `git branch branch_name`

```
user@user-PC MINGW64 /b/Documents/2020五上/TA/2020 BDA/TA_GitHub (master)  
$ git branch working_on_py
```

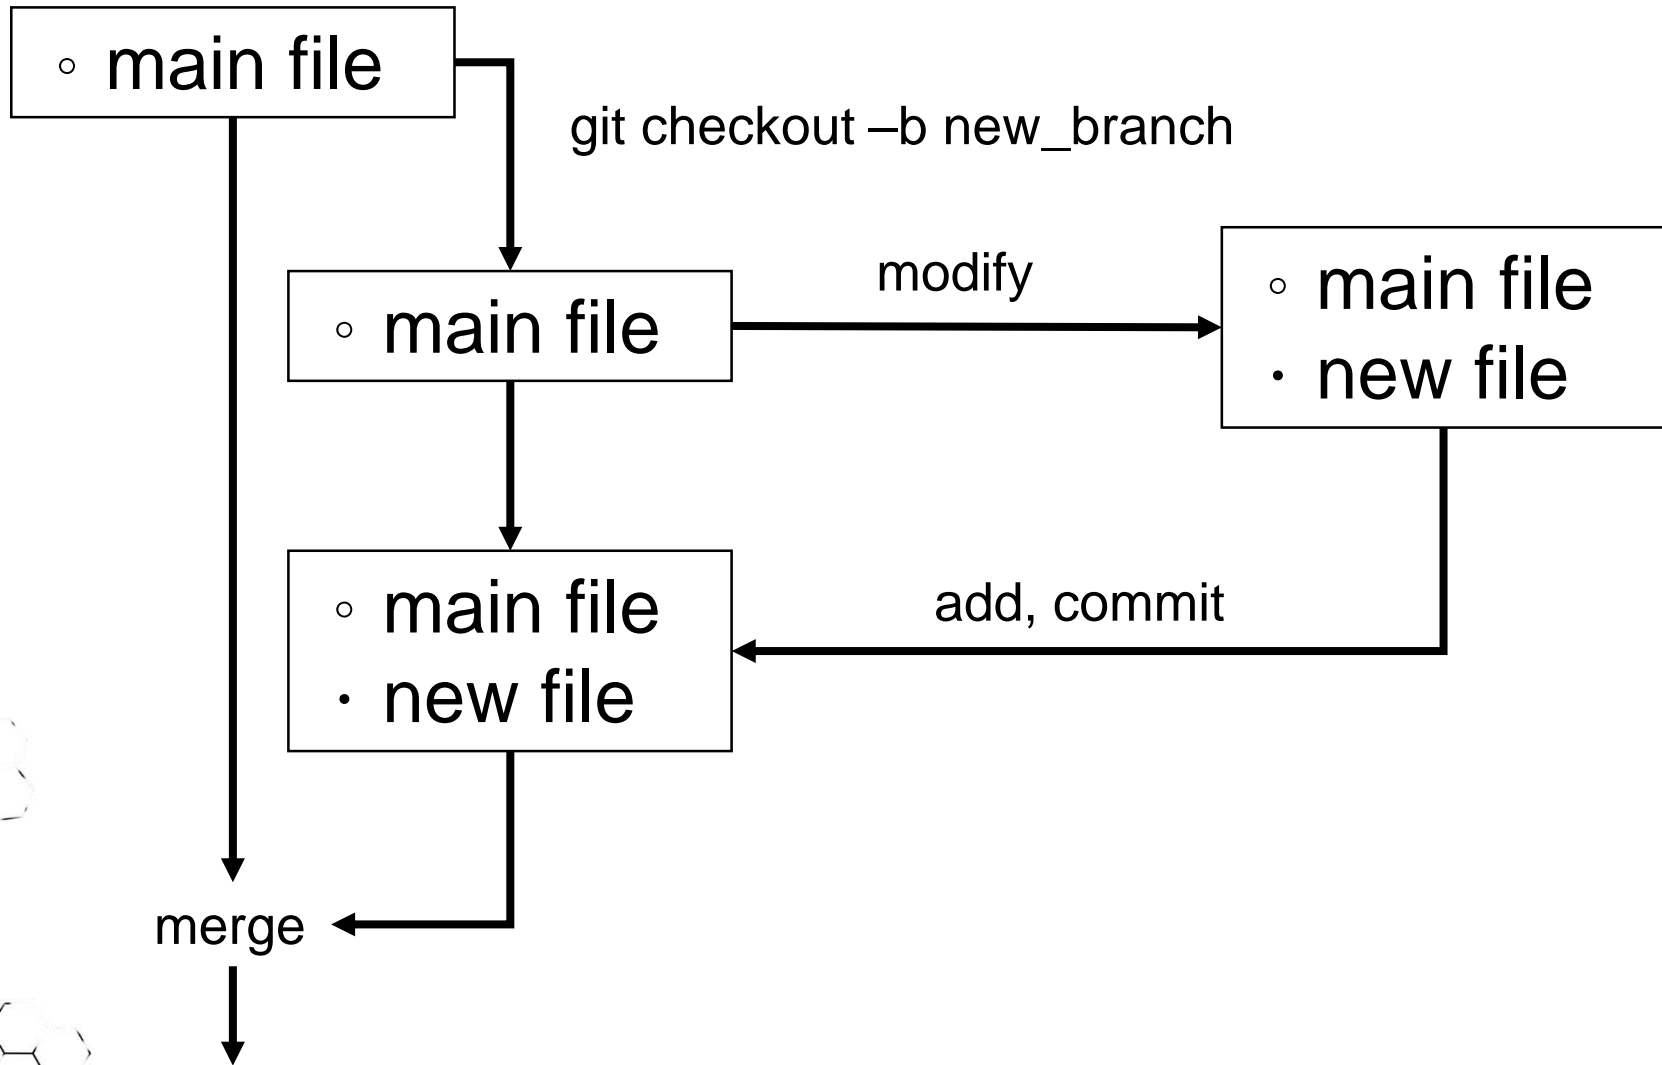

## • git branch

```
user@user-PC MINGW64 /b/Documents/2020五上/TA/2020 BDA/TA_GitHub (master)
$ git branch
* master
  working_on_py

user@user-PC MINGW64 /b/Documents/2020五上/TA/2020 BDA/TA_GitHub (master)
$ git checkout working_on_py
Switched to branch 'working_on_py'

user@user-PC MINGW64 /b/Documents/2020五上/TA/2020 BDA/TA_GitHub (working_on_py)
$ git branch
  master
* working_on_py
```

\* master

- history of diff. branches are diff.
- `git branch -d branch_name`
- `git merge branch_name`
- fast-forward merge (when no diverge)
- three-way merge (diverge but no conflict)
- conflict ? Fix it, add, and commit

# GitHub

- A web-based Git repository hosting service.
- On top of Git's functions, it includes extra features.

- ssh-key : let GitHub know your identity
- \$ ssh-keygen
- you can skip entering the passphrase
- \$ cat /directory of your key/id\_rsa.pub

```
user@user-PC MINGW64 /b/Documents/2020五上/TA/2020 BDA/TA_GitHub (master)

Title

Key

Begins with 'ssh-rsa', 'ssh-ed25519', 'ecdsa-sha2-nistp256', 'ecdsa-sha2-nistp384', or 'ecdsa-sha2-nistp521'

Add SSH key

- push your repository to GitHub

## Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?

[Import a repository.](#)

Owner \*

cyclonelee24 ▾

Repository name \*

/

Great repository names are short and memorable. Need inspiration? How about **fluffy-spork**?

Description (optional)

**Public**

Anyone on the internet can see this repository. You choose who can commit.

**Private**

You choose who can see and commit to this repository.

**Initialize this repository with:**

Skip this step if you're importing an existing repository.

**Add a README file**

This is where you can write a long description for your project. [Learn more.](#)

**Add .gitignore**

Choose which files not to track from a list of templates. [Learn more.](#)

**Choose a license**

A license tells others what they can and can't do with your code. [Learn more.](#)

Create repository

## Quick setup — if you've done this kind of thing before

 Set up in Desktop

or

HTTPS

SSH

git@github.com:cyclonelee24/test.git

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

## ...or create a new repository on the command line

```
echo "# test" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M master
git remote add origin git@github.com:cyclonelee24/test.git
git push -u origin master
```

## ...or push an existing repository from the command line

```
git remote add origin git@github.com:cyclonelee24/test.git
git branch -M master
git push -u origin master
```

Add a README

## About

No description, website, or topics provided.

## Releases

No releases published  
[Create a new release](#)

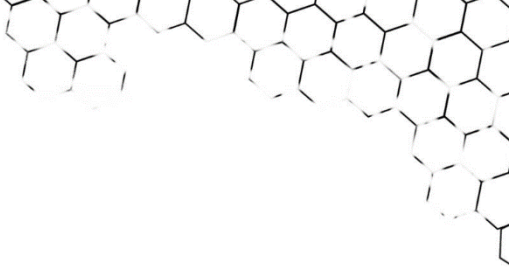

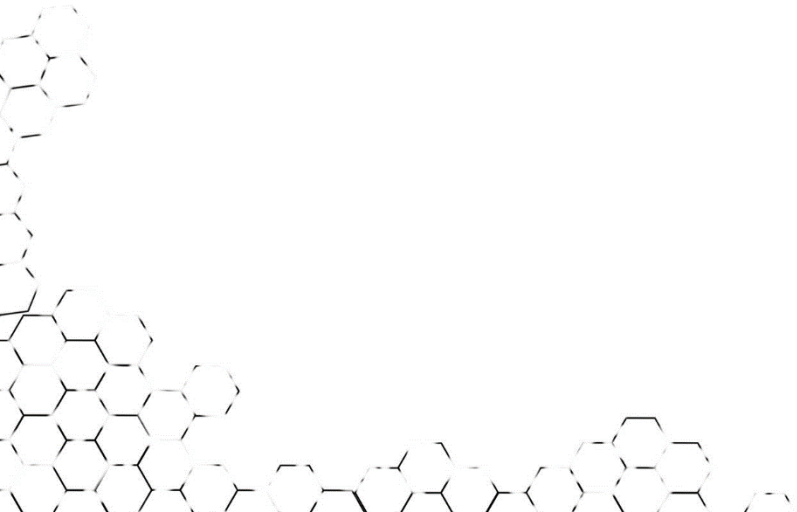

- git fetch : copy the commit done with the remote repository to your branch
- git merge
- git pull = git fetch + git merge
- case : if origin/master is ahead  
→ git merge origin/master

- if remote repository has changes local repository does not have :  
cannot push (can't fast-forward merge)  
→ sync your local repository first

- git rebase : move current branch on top of the rebased branch

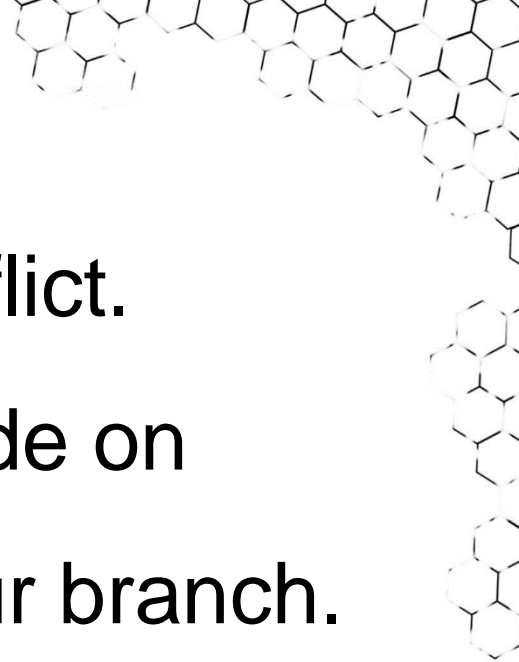

- 
- 
- rebase keep the history linear
  - use it when the changes are minor
  - be careful when using rebase
  - rebase = rewrite the history of commits

# Some remarks

- Use remote repository to incorporate with others.
- Always synchronize your branch before starting any work on you own.
- Avoid large change that modify a lot of different things.

- 
- 
- push/pull often to reduce conflict.
  - Regularly merge changes made on the master branch back to your branch.
  - Should not rebase changes that have been pushed to remote repository.

- Forking : A way of creating a copy of the given repository so that this copy belongs to you.
- you can push changes to your forks
- pull request : commit(s) that you send to the owner of the original repository so that they incorporate it into their tree

- proposed file change : commit on your fork → then create pull request
- same branch → same pull request  
different branch → different pull request
- different projects may have different pull request guidelines
